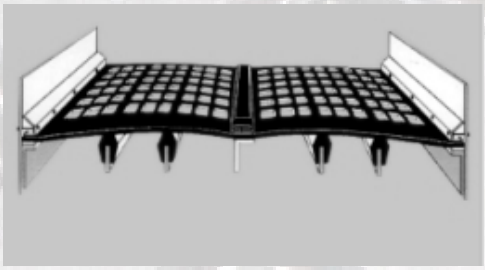
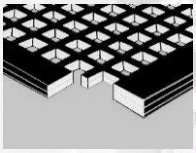
RUBBER SCREEN DECK

TYPE A

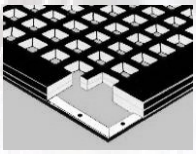


- Rubber screen clothes used for screening on lateral and end tensioned machines provided with support bars.
- Delivered with steel hooks for tension on sides.
- This is the most used type because it combines a high wear resistant with a wide range of apertures and thickness available.
  Also used frequently for screening in the cylinder outlet trommels.

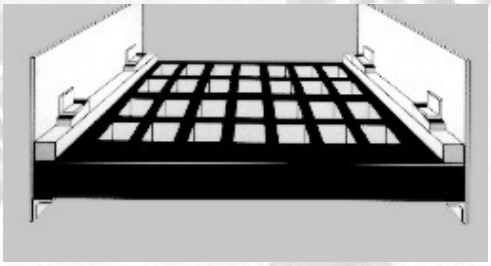


TYPE B

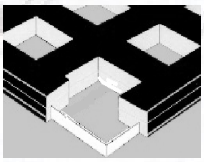
- Self-supporting rubber screen used for screening in machines provided with longitudinal support bars.
- Do not need tension system
- Reinforced with an steel frame inside.



TYPE C



- Self-supporting rubber screen used for screening in machines without support bars.
- Do not need tension system
- Reinforced with an heavy steel frame inside.
- Most used for heavy duties and scalpers but also available for other applications.



TYPE D

- Self-supporting rubber screen used in machines with longitudinal support bars.
- Produced with or without hooks system depending on the machine. System based on a perforated steel plate but with rubber vulcanized as a reinforcement.
- Used also in medium and heavy duties.
